The calendar is divided into the first three columns in the week, the 4th one in the month, and the last one in the year. The current month, day, and year are displayed at the top of the calendar. The settings screen of the tool includes several additional tools. For example, you can change the color of week, month, and year day in the calendar. It's got a decent 4-inch display, a 5-megapixel camera, 3G (but with a carrier option for 4G) and a 1.8GHz Qualcomm quad-core processor. And if you use the included wireless charging attachment, the phone will charge itself, of course. It's built like a tank, too, and it has a very solid feel, with no wiggling or squeaking. Why isn't this a more popular model? I suspect that's because many emerging market consumers are well acquainted with cheap a69d392a70
